Application/Control Number: 10/026,012

Art Unit: 2878

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 3-13, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Mukai et al 3,937,558.

Mukai et al disclose an optical light pen system comprising: a housing (P); an optically conductive tip (C) for redirecting an optical signal; and an optically conductor (5) optically coupled to the tip, wherein the tip is in direct line of sight of one of the group consisting of at least one optical transmitter (L) and at least one optical receiver (D), and the optical conductor is in direct line of sight of the other one of the group consisting of the at least one optical transmitter and the at least one optical receiver. The axis of the tip is coaxial with the axis of the housing and optical signals are transmitted by the

Application/Control Number: 10/026,012

Art Unit: 2878

transmitter are redirected to the receiver by the tip. The tip is able to redirect optical signals in a plurality of radial directions distributed around a longitudinal axis of the system. The tip and the conductor are integrally formed from a single piece of material.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2, 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mukai et al 3,937,558.

With respect to claim 2, although Mukai et al fail to specify the particular material for making the tip and/or the conductor as claimed, selecting a specific material which has been known and available in the art for making a component/element would have been a mere matter of obvious design choice to one of ordinary skill in the art. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Mukai et al by selecting a specific material, as claimed, in order to provide a desired appearance of the system.

With respect to claim 14, although Mukai et al lack an inclusion of an ultrasonic transducer, the use of a known, available ultrasonic transducer for providing vibration would have been obvious to one of ordinary skill in the art. It would have been obvious to one of ordinary skill in the art to modify Mukai et al accordingly in order to provide vibration for the system if so desired.

Page 4

Application/Control Number: 10/026,012

Art Unit: 2878

With respect to claim 15, although Mukai et al fail to specify the type of the light source, the use of a light emitting diode or a laser diode for providing light would have been obvious to one of ordinary skill in the art. It would have been obvious to one of ordinary skill in the art to modify Mukai et al accordingly in order to provide a long lasting life of the use of the light source.

Claims 18-21 are allowable over the prior art of record because the prior art fails to teach a system for determining the position of a stylus comprising: a fixed transceiving portion for transceiving ultrasonic and optical signals, in which the transceiving portion including at least one ultrasonic transducer, and at least one optical transmitter and one optical receiver; an ultrasonic transducer including a single optical transmitter and a single optical receiver, wherein a position of the stylus is determined in accordance with the optical signals and propagation times of the ultrasonic signals.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

I) Graven 3,761,620 discloses an optical input system having light conductors.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Que T. Le whose telephone number is (703) 308-4830.
